

Facility Noise Levels

All noise measurements reflect maximum levels at all property lines

Maximum noise level at any property line

60 dB(A)

This facility will operate at or below 60 dB(A) under ALL conditions

HOW NOISE LEVELS ARE CONTROLLED

Noise levels are achieved through a combination of engineered sound attenuation measures:

Installing all equipment with low-sound fan options

Locating all generators within sound-rated enclosures

Surrounding all rooftop mechanical equipment with a parapet at least 9'6" in height

Installing mufflers on all exhaust stacks
